Eco-Drain System: the new draining paving system by Rosa Gres

- Respects the natural water cycle: rainwater returns to the ground in a natural way.
- Installed on a layer of crushed stone, does not require a concrete slab.
- Completely flat installation possible. A minimum slope of 0.5% is recommended to avoid water stagnation due to surface tension.
- Drainage takes place through ceramic joints specially designed for this purpose.
- Both the joint and base have a high drainage capacity.
