SUBMERGED TYPE POOL SHUTTER: HOUSING DIMENSIONS

For submerged (in-pit) pool shutter systems, a dedicated housing must be constructed within the swimming pool structure. This housing should be located on the short side of the pool and, where possible, separated from the main pool area by a reinforced concrete wall. The length of the housing must be equal to the total width of the pool.

Minimum Sizing Requirements:

- Minimum Width: Total roll diameter + 20 cm
- Minimum Depth (Height): Total roll diameter + 30 cm
- Note: These dimensions can be increased beyond the minimum requirements if desired.

Calculation Example (For a 4m x 8m pool): If a submerged shutter is being installed for a pool with a 400 cm width:

- Housing Length: 400 cm
- Minimum Width: 46.5 cm (roll diameter) + 20 cm = 66.5 cm
- Minimum Depth: 46.5 cm (roll diameter) + 30 cm = 76.5 cm
